

SYNTHETIC TRAINING DOCUMENT — NOT FOR REAL EQUIPMENT

Pump 201 Demonstration Operating Procedure

Version 1.0

Purpose: This fictional procedure exists only to test the JAXN Assist prototype.

Pre-start checks:

1. Confirm the fictional training tank indicates an adequate demonstration level.
2. Verify the simulated suction valve indicator shows OPEN.
3. Verify the simulated discharge path is aligned according to the training diagram.
4. Confirm the demonstration pump is released from fictional maintenance status.
5. Inspect the training display for simulated leaks or abnormal conditions.

If any training condition is not satisfied, stop the demonstration and contact the instructor.

Never apply this synthetic document to actual equipment or an actual industrial facility.
